## NEWS RELEASE

### NEARLY ME® Jacquard Soft Cup Mastectomy Bra

*New feminine patterned bra in popular taupe and cream colors with convenient side opening pocket design*

Nearly Me Technologies, Inc., manufacturers of NEARLY ME® Mastectomy Products, is proud to announce the addition of the new #640 Jacquard Mastectomy to their growing line of mastectomy bras.

This beautiful new patterned bra style is available in popular taupe and cream fashion colors to offer an even greater choice to your mastectomy consumers. This new jacquard style also fits like our wonderful plain soft cup and lace bandeau styles which work extremely well with all of our breast forms. The styling of this bra is classic in design, supportive in fit and reasonable in price. This pretty feminine bra has nylon outer cups with breathable cotton/poly pockets on the inside of each cup for added comfort and security. This new style offers a new upper side opening pocket for easy access for any style of prosthesis. The cups have been designed for an average figure and offer a soft projected profile. Each cup also covers the full breast area so there is no gap between the body and the bra. The wide straps are made of firm satin elastic with back adjustments to help give support and reduce chafing against tender skin. The wider underarm panels help cover sensitive areas and help hold the breast form securely next to the body. This bra comes in 36 sizes beginning at 34A through 48DD. It has been designed exclusively by Nearly Me Technologies for the NEARLY ME® line of Mastectomy products. Imported.

Nearly Me Technologies, LLC currently manufactures the complete line of NEARLY ME® Products which includes the full line of NEARLY ME® Mastectomy Products and in the fashion area, the NEARLY ME® Breast Enhancers as well as RETOUCH® Silicone Scar Reduction Sheeting.
